

Press Release:

EkkoSense, the leading provider of AI-enabled data centre performance optimisation software used internationally by leading brands, has appointed Wexøe A/S as regional partner for Denmark and Sweden.

2nd May 2023 – Wexøe A/S brings innovative AI-powered EkkoSense data centre cooling optimisation software to Danish and Swedish markets. For the first time, Wexøe will provide local support for EkkoSense’s proven EkkoSoft Critical data centre optimisation software. This will enable data centres based in the region to realise quantifiable energy and [carbon savings](#), reduce risk and increase capacity – all within weeks. Wexøe is an experienced integrator of data centre solutions with a strong focus on energy optimisation.

Commenting on the partnership, Wexøe A/S CEO Mogens Brusgaard said: “I am excited for our new co-operation. EkkoSense’s combination of Wireless IoT sensors and powerful visualisation and analytics software will not only support our data centre customers’ daily operations, but also help them achieve quantifiable reductions in CO₂ emissions. EkkoSoft Critical is a game changer for the data centre industry, bringing an entirely new class of accuracy and granularity to data centre operations and helping teams to optimise the performance of their existing investments.

“The software’s ability to provide true real-time visibility of cooling, power and capacity performance not only shows what’s happening, but also why – allowing teams to make data-driven decisions on how to resolve issues and, potentially, avoid business-critical downtime,” continued Mogens. “And, in addition to next-level cooling optimisation, data centres will also benefit from valuable data to support their predictive and preventative maintenance activities. With EkkoSense you can optimise your contained cooling next level and you get data for your disposal for predictive- and preventive maintenance.

“We’re also looking forward to demonstrating Ekkosense’s software EkkoSoft Critical to visitors at the upcoming Data Centre Expo in Stockholm this week, and sharing key EkkoSense benefits including removing thermal and power risk, minimising energy waste, and contributing carbon savings to corporate ESG programmes,” added Mogens.

[Matthew Farnell](#), EkkoSense’s Director for EMEA who will be on the Wexøe A/S stand at the show in Stockholm added: “EkkoSoft Critical is the most intelligent, intuitive and immersive AI-driven self-optimisation software tool on the market for data centres. It is already used and endorsed by international brands including Virgin Media O2, Digital Realty, mobile operator Three, and colocation provider Telehouse. Deployable within weeks, EkkoSoft Critical’s light-touch approach offers rapid benefits for organisations – particularly those who want to reduce data centre cooling usage and deliver energy savings as part of corporate ESG commitments. Team EkkoSense is really looking forward to working with Wexøe A/S, and the Stockholm show is a great platform to kick-off the partnership.”

EkkoSense's [EkkoSoft Critical](#) software delivers [cooling energy savings](#), helping data centers to reduce cooling energy consumption at a time when ESG demands have never been higher. With EkkoSoft Critical, EkkoSense delivers a compelling business case, enabling true real-time M&E Capacity Planning for power, cooling and space at a fraction of the cost of more expensive and complex DCIM solutions. EkkoSense helps data center teams to secure immediate benefits, with its light-touch deployment and non-invasive nature contributing directly to carbon reduction targets. [Video](#).

###

About Wexøe A/S and Wexoe AB

For the past 60 years, Wexøe A/S, Denmark and their subsidiary Wexoe AB, Sweden, have played a significant role in the Danish and Swedish marketplace as a Value-added Distributor of solutions, products, and services for the electrical installations - in residential, commercial, and industrial buildings - as well as solutions, products and services for electrical power, signal and data in industrial applications. The Wexøe A/S range of solutions and services extends from energy distribution, cable management, industrial enclosures and building automation - to network infrastructure and IT-enclosures. Wexøe's brand values are fully in line with the values of its first class partners, focusing on the provision of an extensive and complete offering of the highest quality, with convenient turnkey solutions, great customer service, and effective innovation through close co-operation.
